OM protein - protein search, using sw model

December 6, 2001, 08:00:51 ; Search time 50.21 Seconds (without alignments) 6.572 Million cell updates/sec Run on:

1 SLFEGIDGY 9 PEP1-MOD8G 48 Title: Perfect score: Sequence: BLOSUM62 Gapop 10.0 , Gapext 0.5 Scoring table:

100059 seqs, 36664827 residues Searched:

100059 Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt\_39:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

THE HSP70S IN MATOCHONBIA AND THE ENDOPLASHIC RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE FOR PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PATHWAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILLITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROPEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAMAGE.

-1. INDUCTION: BY HEAT SHOCK.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sainis I., Angelidis C., Pagoulatos G., Lazaridis I.; "The hsc70 gene which is slightly induced by heat is the main virus inducible member of the hsp70 gene family."; FEBS Lett. 355:282-286(1994).

-1- FUNCTION: SSA2 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE RNOPLASMATIC RETICULUM. A FUNCTIONAL DIPFERENCE BETWEEN YEAST SRA1 AND SSA2 PROTEINS IS EXPECTED. SSA2 CAN PARTICIPATE IN THE ATP-DEPENDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.
                                                                                                                                                                                                                                                                                                                                                                          Garrels J.I., Futcher B., Kobayashi R., Latter G.I., Schwender B., Volpe T., Warner J.R., McLaughlin C.S.; "Protein identifications for a Saccharomyces cerevisiae protein

Redynactin, an agonist-regulated F-actin capping activity is associated with an Hsc70 in Dictyostelium.";
J. Biol. Chem. 268:23267-23274 (1993).
-!- FUNCTION: AFFECTS ACTIN POLYMERIZATION THROUGH INTERACTION WITH THE ACTIN-BINDING PROPEIN CAP32/34. ACTS AS A CHAPERONE BY STIMULATING THE REFOLING OF DENATURATED CAP32 AND CAP34.
-!- SUBCELLUAR LOCATION: CYTOPLASMIC. FOUND IN F-ACTIN-RICH REGIONS OF THE CALL CORFEX AND CELL PROFIESSING.
-!- DEVELOPMENTAL STRAGE: HEAT SHOCK COGNNTE PROTEINS ARE EXPRESSED CONSTITUTIVELY DURING NORMAL DEVELOPMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CHEATOT ACCURATION OF THE CHAPERONES, HSP70S STABILLIZE ANIM. Genet. 25:196-196(1994).

-1- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILLIZE PREXISERT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF UNBALY TRANSLATED FOLYEPETIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THE HSP70S IN MITOCHONDRIA AND THE ENDOPLASMIC RETICCULM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORE PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PATHWAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILLITY TO RECOGNIZE NOWNTIVE CONFORMATIONS OF OTHER PROFINS. THEY BIND EXTENDED PEPTIDE SECREBYS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION, OR FOLLOWING

THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOGIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS INDUCED DAMAGE. SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Complete nucleotide sequence of a porcine HSP70 gene.";

-1- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREEXISTENT PROTEINS AGAINST AGGREGATION AND MEDITATE THE FOLDING OF NEWLY TRANSLATED POLYDEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED BEPTIDES EGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAMAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Perry M.D., Aujame L., Shtang S., Moran L.A.; *Structure and expression of an inducible HSP70-encoding gene from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BIOCHIM. BLOPHYS. Acta 1219:64-72(1994).

BIOCHIM. BLOPHYS. Acta 1219:64-72(1994).

-!- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREXISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYEPETIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONNATURE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDES SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLIVEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLACTION, OR FOLLOWING STRESS-INDUCED DAMAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rattus norvegicus (Rat).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description

dnaK-type molecular chaperone HSP70a - California sea hare (fragment)
N;Alternate names: heat shock protein 70
C;Species: Aplysia californica (California sea hare)
C;Species: Aplysia californica (California sea hare)
C;Species: Aplysia californica (California sea hare)
C;Accession: A44261
R;Kuhl, D.; Kennedy, T.E.; Barzilai, A.; Kandel, E.R.
J. Cell Biol. 119, 1069-1076, 1993
A;Title: Long-term sensitization training in Aplysia leads to an increase in the exprance number: A44261; MUID:93077669
A;Title: Long-term sensitization training in Aplysia leads to an increase in the exprancession: A44261
A;Status: preliminary; not compared with conceptual translation
A;Molecule type: nucleic acid
A;Residues: 1-209 <KUH>
A;Note: sequence extracted from NCBI backbone (NCBIP:118951)
C;Genetics:
A;Gene: HSP70a
C;Function:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                               A; Description: Nucleotide sequence of the CDNA encoding a monkey 70kd heat shock protein A; Reference number: S31766
A; Accession: S31766
A; Accession: S31766
A; Molecule type: mRNA
A; Residues: 1-638 <SAI>
FEBS Lett. 355, 282-286, 1994
A; Title: The hsc70 gene which is slightly induced by heat is the main virus inducible me A; Recession: 115627; MUID: 95080396
A; Accession: 115627; MUID: 950801396
A; Accession: 115627
A; Status: preliminary; translated from GB/EMBL/DDBJ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A;Introns: 61/2
C;Function:
A;Description: involved in protein folding and assembling/disassembling of protein compl
C;Superfamily: heat shock protein 70
C;Keywords: ATP; heat shock; molecular chaperone; stress-induced protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  dnaK-type molecular chaperone 701V - sea urchin (Paracentrotus lividus)
N.Alternate names: heat shock protein 701V; hsp701V protein
C; Species: Paracentrotus lividus (common urchin)
C; Date: lo.Jun-1993 #sequence_revision 10-Jun-1993 #text_change 20-Aug-1999
C; Accession: JC1391
R; Sconzo, G.; Scardina, G.; Ferraro, M.G.
Agene 121, 353-358, 1992
A; Title: Characterization of a new member of the sea urchin Paracentrotus lividus hsp70
A; Reference number: JC1391; MUID:93077053
A; Accession: JC1391
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A; Description: involved in protein folding and assembling/disassembling of protein compl C; Superfamily: heat shock protein 70 C; Keywords: ATP; molecular chaperone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

A; Map position: IV
A; Introns: 69/1; 331/3; 558/3
C; Function:
A; Description: involved in protein folding and assembling/disassembling of protein completion: involved in protein 70
C; Superfamily: heat shock protein 70
C; Superfamily: heat shock; molecular chaperone; stress-induced protein
C; Keywords: ATP; heat shock; molecular chaperone; stress-induced protein
C; Keywords: ATP; heat shock; molecular chaperone; stress-induced protein
C; Keywords: ATP; heat shock; molecular chaperone; stress-induced protein
C; Keywords: ATP; heat shock; molecular chaperone; stress-induced protein
C; Keywords: ATP; heat shock; molecular chaperone; stress-induced protein
C; Keywords: ATP; heat shock; molecular chaperone; stress-induced protein

Submitted (SEP-1994) to the SWISS-PROT data bank.
-1- FUNCTION: SA32 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES
BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE
ENDOPLASMATIC RETICULUM. A FUNCTIONAL DIFFERENCE BETWEEN YEAST
SSA1 AND SA32 PROTEINS IS EXPECTED. SSA2 CAN PARTICIPATE IN THE
ATP-DEPENDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.
                                                                                                                                                                                                                                                                           Slater M.R., Craig E.A.; "The SSA1 and SSA2 genes of the yeast Saccharomyces cerevisiae."; Nucleic Acids Res. 17:805-806(1989).

OF UNEXT TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN
OF GANELLES. THE HSP70S IN MITOCHONDRIA AND THE ENDOPLASMIC
OF RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORE FOR PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGHAL TRANSDOCTION
PATHWAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE
CONFORMATIONS OF OTHER ABILITY TO RECOGNIZE NONMATIVE
CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE
SEGMENTS WITH A NET HYDROHOBIC CHARACTER EXPOSED BY POLYPEPTIDES
CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE
SEGMENTS WITH A NET HYDROHOBIC CHARACTER EXPOSED BY POLYPEPTIDES
CONFORMATIONS OF OTHER PROTEINS.
CITCHESS INDUCED DAMAGE.

-1: INDUCTION: BY HEAT SHOCK.
CITCHESS THE HEAT SHOCK PROTEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright. *Aginactin, an agonist-regulated F-actin capping activity is associated with an HSC70 in Dictyostelium.";

J. Biol. Chem. 268:32367-3274(1993).

-I- FUNCTION: AFFECTS ACTIN POLYMERIZATION THROUGH INTERACTION WITH THE ACTIN-BINDING PROPEIN CAP32/34. ACTS AS A CHAPERONE BY STIMULATING THE REFOLDING OF DENATURATED CAP32 AND CAP34.

-I- SUBCELLULAR LOCATION: CYTOPLASMIC. FOUND IN F-ACTIN-RICH REGIONS OF THE CELL CORPEX AND CELL PROTRUSTONS.

-I- DEVELOPMENTAL STAGE: HEAT SHOCK COGNATE PROTEINS ARE EXPRESSED CONSTITUTIVELY DURING NORMAL BEVELOPHENT.

-I- SIMILARITY: BELONGS TO THE HEAT SHOCK PROPEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

OTHER PROPERTY ON WITH OTHER CHAPERONES, HSP70S STABILIZE 1. FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE PREEXISTENT PROTEINS AGAINST AGGREGATION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN ORGANELLES. THESE CHAPERONES PRATICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDE SEGMENTS WITH A NET HYDROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBERANE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAMAGE.

THESE CHAPERONES PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECOGNIZE NONDATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PEPTIDES SEGMENTS WITH A NET HYDROPHOSIC CHARACTER EXPOSED BY POLYBEPTIDES DURING TRANSLATION AND MEMBRARE TRANSLOCATION, OR FOLLOWING STRESS-INDUCED DAWAGE.

1- INDUCTION: BY HEAT SHOCK.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Longo F.M., Wang S., Narasimhan P., Zhang J.S., Chen J., Massa S.M., Sharp F.R.;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Garrels J.I., Futcher B., Kobayashi R., Latter G.I., Schwender B., Volpe T., Warner J.R., McLaughlin C.S.; Submitted (SEP-1994) to the SWISS-PROT data bank.

1- FUNCTION: SSA1 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE ENDOPLASMATIC RETICULUM. A FUNCTIONAL DIFFERRNCE BETWEEN YEAST SSA1 AND SSA2 PROPERINS IS EXPECTED. SSA1 CAN PARTICIPATE IN THE ATP-DEPRNDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.

1- SUBCELLULAR LOCATION: CYTOPLASMIC.
                                                                              Garrels J.I., Futcher B., Kobayashi R., Latter G.I., Schwender B., Volpe T., Warner J.R., McLaughlin C.S.;
Protein identifications for a Saccharomyces cerevisiae protein database.";

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 11, Sequence 23, Sequence 23, Sequence 22, Sequence 24, Sequence 24, Sequence 24, Sequence 84, Sequence 84, Sequence 86, Seque

Sequence 24, Application US/08479156

Patent No. 5663066

GENERAL INPORMATION:
APPLICANT: Rabin, Nina
APPLICANT: Nichols, Ralph
APPLICANT: Leff, Richard
TITLE OF INVENTION: Human Histidyl tRNA Synthetase
NUMBER OF SEQUENCES: 24

CORRESPONDENCE ADDRESS:
ZIP: 92660
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMBUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/479,156
FILING DATE: J-10N-1995
CLASSIFICATION NUMBER: US 08/052,404
FILING DATE: 22-APR-1993
ATTORNEY/AGENT INFORMATION:
NAME: Fuller, Michael L.
REDERGENTATION NUMBER: 35,516
REFERENCE/POCKET NUMBER: 35,516
REFERENCE/POCKET NUMBER: 31,516
RELEPHONE: G19-23-8950
TELEPHONE: G19-23-8950
INFORMATION FOR SEQ ID NO: 22:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 88, Application US/08652877

Patent No. 6187548

GENERAL INFORMATION:
APPLICANT: Akerstrom, Goran
APPLICANT: Crumley, Gregg R.
APPLICANT: Crumley, Gregg R.
APPLICANT: Hyalm, Goran
TITLE OF INVENTION: Human Calcium Sensor Protein, Fragments
TITLE OF INVENTION: Human Calcium Sensor Protein,
TITLE OF INVENTION: Thereof and DNA Encoding Same
NUMBER OF SEQUENCES: 106
CORRESPONDENCE ADDRESS:
A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          62.3%; Score 33; DB 4; Length 4655; 70.0%; Pred. NAME: Savitzky, Martin
REGISTRATION NUMBER: 29,699
REFERENCE/DOCKET NUMBER: 41355E-US
TELECOMMUNICATION INFORMATION:
TELEPHONE: 610-454-3808
INFORMATION FOR SEQ ID NO: 86:
SEQUENCE CHARACTERISTICS:
LENGTH: 4655 amino acids
TYPE: amino acids
TOPOLOGY: linear

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                             Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A; Description: involved in protein folding and assembling/disassembling of protein co C; Superfamily: heat shock protein 70 C; Keywords: ATP; molecular chaperone
                                 dnaK-type molecular chaperone hsp70 - green monkey
N;Alternate names: heat shock protein 70
C;Species: Cercopithecus aethiops (green monkey, grivet)
C;Date: 13-Jan-1995 **sequence_revision 13-Jan-1995 **text_change 20-Aug-1999
C;Accession: S31766; 136927
R;Sainis, I.; Angelidis, C.; Pagoulatos, G.; Lazaridis, I.
submitted to the EMBL Data Library, January 1993
A;Description: Nucleotide sequence of the cDNA encoding a monkey 70kd heat shock prot A;Reference number: S31766
A;Accession: S31766
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A; Description: involved in protein folding and assembling/disassembling of protein co C; Superfamily: heat shock protein 70

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       data type molecular chaperone hspB - slime mold (Dictyostelium discoideum) (fragment)
N;Alternate names: 70k heat shock cognate protein aginactin; F-actin capping protein agi
C;Species: Dictyostelium discoideum
C;Species: Dictyostelium discoideum
C;Accession: A48872
R;Eddy, R.J.; Sauterer, R.A.; Condeelis, J.S.
J;Biol. Chem. 268, 23267-23274, 1993
A;Title: Aginactin, an agonist-requiated F-actin capping activity is associated with an A;Reference number: A48872; MUID:94043116
A;Recession: A48872
A;Reference number: A48872
A;Rolecule type: mRNA
A;Residues: Preliminary
A;Molecule type: mRNA
A;Residues: 1-636 < Cabb.
A;Cross-references: GB:L22736; NID:9433179; PIDN:AAA33219.1; PID:9433180
A;Cross-references: GB:L22736; NID:9433179; PIDN:AAA33219.1; PID:9433180
A;Note: authors translated the codon ACA for residue 10 as Pro, GCT for residue 60 as Vd
C;Function:
A;Description: Involved in protein folding and assembling/disassembling of protein compl
C;Superfamily: heat shock protein 70
C;Reywords: ATP; molecular chaperone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A Molecule type: DNA

A. Residues: 1-634 < MOR>
A. Residues: 1-634 < MOR>
A. Residues: 1-634 < MOR>
A. Stronger of the codon TCG for residue 583 as Trp
C. Function:
A. Note: the authors translated the codon TCG for residue 583 as Trp
C. Function:
A. Description: involved in protein folding and assembling/disassembling of protein compl
C. Superfamily: heat shock protein 70
C. Keywords: ATP; molecular chaperone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               dnaK-type molecular chaperone - chicken
Nalternate names: heat takok protein 70
C; Alternate names: heat takok protein 70
C; Species: Gallus gallus (chicken)
C; Date: 19-Nov-1988 #sequence_revision 19-Nov-1988 #text_change 20-Aug-1999
